TROUBLESHOOTING

Error situation:
The hose has a kink, functionality cannot be guaranteed.

Corrective action:
Make sure the hose is inserted all the way to the ledge of the connecting piece. Then slightly rotate the hose on the switch connecting piece left or right and insert the switch - repeat hose rotation / switch insertion until the hose position looks like in picture 5.

Leave the hose connected to the switch while marking the hole positions or attaching the housing. This ensures proper hose position as in picture 5 upon re-inserting the switch.

For the positioning of the mounting holes use the housing or the drilling template on page 2.

Once the holes are drilled the housing can be fixed with screws.

The hose is mounted in the case without any extreme bending.
